Department of Engineering Physics  
College of Engineering, UW-Madison  

Academic Policies and Procedures  
for Graduate Work  
in  
Nuclear Engineering and Engineering Physics  

Last modified Fall 2018  

This guide applies to students entering the program after August 2018. Students admitted prior to this should continue to follow the Student guide in effect when they entered the program. They may petition the department to select features of the new curriculum.
**Introduction**

This bulletin details the academic policies and procedures for students working toward the M.S. and Ph.D. degrees in Nuclear Engineering and Engineering Physics. The graduate program in Nuclear Engineering and Engineering Physics is administered by the Department of Engineering Physics. The time schedules refer to those for a full-time student. Reference should also be made to Information for Graduate Students for Non-Academic Procedures; this is available from the Graduate Student Services Office, 3182 Mechanical Engineering.

Students should become familiar with the pertinent material in this bulletin and with the requirements of the Graduate School as given in the Graduate School Guidelines (https://grad.wisc.edu/academic-policies/). It is the student's responsibility to make sure that all requirements are met.

We welcome you to the University of Wisconsin-Madison and to the Department, and wish you a successful graduate career!

**Admission to Graduate Study**

For admission to graduate study in Nuclear Engineering and Engineering Physics, an applicant must have a bachelor's degree in engineering or physical science and an undergraduate record that indicates an ability to successfully pursue graduate study. The Graduate School requires a minimum undergraduate grade point average of 3.0 on a 4.0 basis on the equivalent of the last 60 semester hours from the most recent bachelor's degree. In special cases, students with grade point averages lower than 3.0 who meet all the general requirements of the Graduate School may be considered for admission on probation. The GRE scores are required for all applicants who are not UW-Madison graduates. The TOEFL/IELTS scores are required for international applicants.

It is highly recommended that students take courses that cover the same material as these UW-Madison courses before entering the program:

<table>
<thead>
<tr>
<th>Course and Semester Credits</th>
<th>Typical UW-Madison Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Differential equations, 3 cr</td>
<td>Math 319 or 320</td>
</tr>
<tr>
<td>Advanced mathematics, 3 cr</td>
<td>Math 321</td>
</tr>
<tr>
<td>Nuclear physics, 3 cr</td>
<td>NE 305</td>
</tr>
<tr>
<td>Materials science, metallurgy, or solid state physics, 3 cr</td>
<td>MS&amp;E 350 or 351</td>
</tr>
<tr>
<td>Heat transfer or fluid mechanics, 3 cr</td>
<td>CBE 320</td>
</tr>
<tr>
<td>Mechanics, 3 cr</td>
<td>Phys 311, EMA 202</td>
</tr>
</tbody>
</table>

Descriptions of course content can be accessed through the University's course guide.

A student may enter without having taken these courses. However, in such cases students must inform their advisors, who will help them plan a course of study that will provide adequate background for our department's graduate curriculum.

Provisions for admission on probation or as an applicant for more than one master's degree (e.g., simultaneous M.S. degrees in two departments) are given in the Graduate School website: https://grad.wisc.edu

**Admission as a Special Student**

The Graduate School will permit admission as a Special Student for students whose academic record is difficult to evaluate, but otherwise shows promise for graduate study. While graduate level work done as a Special Student does not earn Graduate School credit, it may still fulfill departmental course requirements. It can also be used to meet admission requirements and to correct weaknesses in the student's preparation for graduate study. After a satisfactory record as a Special Student, the student can then apply for admission as a regular graduate student. The student is advised to consult the Graduate School guidelines to determine the current policies and regulations.
Grade Policy

The Graduate School requires an average record of B or better in all 300-level or above courses taken as a graduate student regardless of whether the course counts for credit in the NEEP program. The Graduate School reviews each student's progress every semester and will usually refuse continued enrollment after two semesters of below B-average grades unless unusual or extenuating circumstances have prevailed. The NEEP Program requires that courses in which grades of BC, C, or below are received cannot be counted toward a graduate degree except as follows:
1. Credits of C will be allowed provided they are balanced by twice as many credits of A or by four times as many credits of AB.
2. Credits of BC will be allowed provided they are balanced by twice as many credits of AB or by an equal number of credits of A.

Important Advice
Because of the grade requirements, it may be desirable that foreign students coming from an entirely different university system, foreign students with inadequate preparation, or American students with inadequate preparation enroll for at least the first semester in graduate study as a Special Student. (See Admission to Graduate Study.)

Advising

Each graduate student will be appointed a major professor by the chair of the Graduate Studies Committee upon entering the program. If the student is supported by a research assistantship, this will normally be the professor in charge of the research program. In other cases this will normally be a faculty member with expertise in the student's area of interest. Students desiring to change their major professor should consult with the Department Chair. Students may have a major professor outside the department if it is appropriate for the student's research area and if the professor is willing to serve in that capacity. In this case, the chair of the Graduate Studies Committee also appoints a member of the departmental faculty to serve as the student's academic (non-research) advisor. All students are required to meet with their advisor before enrolling for the next term’s classes.

Wait Listed Courses: In any given semester, courses may fill up quickly depending on demand. Some courses may have a wait list established through the enrollment system. Students will be notified by email if they have been given permission to enroll from the wait list. The department will assist students in enrolling for the courses they need. However, there is no guarantee that students will be allowed into a waitlisted section.

Grievance Procedure

Students who feel that they have been treated unfairly have the right to a prompt hearing of their grievance. Such complaints may involve course grades, classroom treatment, advising, various forms of harassment, or other issues. Any student or potential student may use these procedures.

Procedures for proper accounting of student grievances:
- The student should speak first with the person toward whom the grievance is directed. In most cases, grievances can be resolved at this level.
- Should a satisfactory resolution not be achieved, the student should contact the program’s Grievance Advisor to discuss the grievance. The Graduate Program Coordinator can provide students with the name of this faculty member, who facilitates problem resolution through informal channels. The Grievance Advisor is responsible for facilitating any complaints or issues of students. The Grievance Advisor first attempts to help students informally address the grievance prior to any formal complaint. Students are also encouraged to talk with their faculty advisors regarding concerns or difficulties if necessary. University resources for sexual harassment concerns can be found on the UW Office of Equity and Diversity website.
• If the issue is not resolved to the student’s satisfaction the student can submit the grievance to the Grievance Advisor in writing, within 60 calendar days of the alleged unfair treatment.
• On receipt of a written complaint, a faculty committee will be convened by the Grievance Advisor to manage the grievance. The program faculty committee will obtain a written response from the person toward whom the complaint is directed. The response will be shared with the person filing the grievance.
• The faculty committee will determine a decision regarding the grievance. The Grievance Advisor will report on the action taken by the committee in writing to both the student and the party toward whom the complaint was directed within 15 working days from the date the complaint was received.
• At this point, if either party (the student or the person toward whom the grievance is directed) is unsatisfied with the decision of the faculty committee, the party may file a written appeal. Either party has 10 working days to file a written appeal to the College of Engineering.

The Assistant Dean for Graduate Affairs (engr-dean-graduateaffairs@engr.wisc.edu) provides overall leadership for graduate education in the College of Engineering (CoE), and is a point of contact for graduate students who have concerns about education, mentoring, research, or other difficulties.

The Graduate School has established policies governing student conduct, academic dishonesty, and sexual and racial harassment. The Graduate School also has procedures for students wishing to appeal a grievance decision made at the college level. These policies are described in the Academic Policies and Procedures at https://grad.wisc.edu/academic-policies/.

Limits on Credits per Term

Full-time student status requires the student enroll for a minimum of 8 credits of course work numbered 300 or higher, including research credits, each semester until the student becomes a Ph.D. dissertator. Dissertators must enroll for exactly three credits. The normal maximum number of credits is 15.

Holders of research assistantships, teaching assistantships, traineeships, or fellowships are required to maintain full-time status each semester. Research assistants are expected to register for at least two credits (3 credits for dissertators) during the summer session. Teaching assistants with summer appointments need not normally be registered during the summer. Fellowship holders should consult the terms for their fellowships. A full-time student is limited to 12 credits during the summer.

Graduate Student Seminar Requirement

In addition to regular attendance of the Engineering Physics Colloquium (held on Tuesdays at 4:00 pm in 106 Engineering Research Building during the academic year), all Nuclear Engineering and Engineering Physics graduate students are expected to attend at least one additional research seminar or research group meeting where they may present their own research in a seminar format. First year graduate students are exempt from giving a presentation (although they may volunteer to give one), but all non-first year graduate students are expected to present on an annual basis.

The goals of the presentation requirement include:
• Provide professional development opportunities for graduate students.
• Improve the oral presentation skills of graduate students.
• Improve the ability of graduate students to "think on their feet."
• Provide an opportunity for graduate students to further understand and explain the context of their research.
• Provide a forum in which conference presentations can be practiced in front of a large technical audience.

• Improve information exchange between research groups.

• Enhance the sense of community among students in the graduate programs within the Department of Engineering Physics.

Parental Leave Policy for Graduate Student Assistants

The College of Engineering (CoE) is fully committed to providing a climate of support for women and their partners who choose to have children during their graduate studies. The goal of this CoE parental leave policy is to reduce academic and financial hardships for a) female graduate students during the late stages of their pregnancy, childbirth, and postpartum periods, and b) any graduate student who is a new parent providing care for his/her infant.

All CoE graduate students with current research, teaching, or project assistantships are eligible to request a parental leave under this policy. Upon request, expectant mothers will be provided with 12 weeks of paid accommodation time for childbirth. Other new parents (father, adoptive mother, adoptive father) will, upon request, be provided with 6 weeks of paid accommodation time. There will be no research or teaching expectations of the student during the leave.

Students should ideally notify their department (through the Department Administrator or Department Chair) six months prior to the expected birth to request the leave. Students should alert their research advisor or TA coordinator at that time as well to ensure that the ongoing research and teaching environment is safe for the expectant mother. It is recognized that each case will be unique in terms of the timing of the pregnancy or adoption relative to the academic calendar, and that creative and supportive solutions will be required on the part of advisors, chairs, TA coordinators, etc.

The leave will ordinarily begin at the time of birth, but other proposals will be considered. Departments – both advisors and chairs – are expected to provide flexibility in working out the details of the leave and to adjust the timeline of the leave as needed to accommodate any unexpected medical issues that arise during pregnancy (e.g. doctor-ordered bed rest).

All academic requirement deadlines (e.g., qualifying exams) will be extended for the student requesting the leave, consistent with department academic timelines.

Graduate Policy-Related Web Sites

The Graduate School web site (http://grad.wisc.edu) has extensive information concerning policies and procedures for graduate students. You are responsible for consulting it and abiding by it.

Other useful web sites are:

Engineering Physics Department  http://www.engr.wisc.edu/department/engineering-physics

College of Engineering  http://www.engr.wisc.edu
Master of Science Degree

Requirements for the Master of Science Degree

1. The following courses or courses with a similar material content must be taken either prior to or during the course of study for the M.S. degree:
   a. NE 427
   b. NE 428 or NE 526
   c. NE 408 or NE 569

   Students who have taken courses with a similar material content at another institution, must contact the department chair for approval of the specific course(s).

2. The candidate must complete, during the course of graduate study, 30 credits of technical courses approved by his or her advisor. These courses must be consistent with the following requirements:
   a. Students must take at least 15 credits at the graduate level. This is defined as courses 600-level and above or from NE 506, 520, 525, 526, 527, 528, 536, 541, 555, 569, 574; EP 547, 548; or any course defined as “Grad 50%” in Math, Physics, Chemistry, Computer Science, or any other engineering department, except EPD. “Grad 50%” courses are designated as such in the UW-Madison Guide, guide.wisc.edu. This includes 790 thesis credits.
   b. If the student completes a Master’s thesis, then
      i. At least 8 credits of NE courses at the 400 level or above are required. Cooperative Education, Thesis, and Seminar credits cannot be used to satisfy this requirement.
      ii. A maximum of 12 credits may be granted for the thesis
      iii. The remaining credits (also numbered 400 or higher) must be in appropriate technical areas such as physical sciences, radiology, or suitable biological studies, but not humanities or social studies.
      iv. At least 9 credits must be numbered 500 or higher. Cooperative Education, Thesis, and Seminar credits cannot be used to satisfy this requirement. See a). above.
      v. Up to 3 credits can be seminar credits.
   c. If the student does not complete a Master’s thesis, then
      i. At least 15 credits of NE courses at the 400 level or above are required. Cooperative Education, Thesis, and Seminar credits cannot be used to satisfy this requirement.
      ii. The remaining 15 credits (also numbered 400 or higher) must be in appropriate technical areas such as physical sciences, radiology, or suitable biological studies, but not humanities or social studies.
      iii. At least 12 credits must be numbered 500 or higher. See a). above.
      iv. Up to 3 credits can be seminar credits. No more than one seminar credit can be taken in any given semester.
      v. The student must complete an oral exam covering the courses taken as a graduate student. This exam is to be arranged with the student’s advisor prior to graduation.

3. The courses taken as a graduate student must satisfy the departmental grade policy (see page 2).

4. Only one course (maximum of 3 credits) of independent study is allowed (699, 999).

5. The candidate must satisfy all Graduate School requirements, including grade point average requirements.
Transfer of Credits
Students may transfer up to 6 credits of graduate work taken at another institution if they meet departmental M.S. requirements. Students with a BS degree in Nuclear Engineering or other engineering field at UW-Madison may also use 7 credits of their undergraduate work towards their MS. Students with a BS degree from an ABET accredited engineering discipline at another institution may request permission from the EP Chair to use 7 credits of undergraduate work towards their MS degree.

Explanation of Research and Thesis Credits
NE 790 is for research that is expected to lead to a M.S. thesis, NE 890 is for research where the student has not yet become a dissertator and the research will not be used for a M.S. thesis, and NE 990 is for Ph.D. dissertation research where the student is a dissertator. Credits taken per semester are variable. Students should discuss the appropriate number of credits for a specific semester with their advisor.

Master's Thesis
1. A Master's thesis is not required. It is usually recommended for students intending to finish their graduate study with a Master's degree and who are interested in research. Students should consult their advisor about the desirability of submitting a Master's thesis.
2. A maximum of 12 credits may be granted for a master's thesis. Credit for Master's research courses (NE 790) will be granted toward meeting the M.S. requirements only when a formal M.S. thesis is submitted.
3. The Department requires that the M.S. thesis be submitted to the Memorial Library. It is suggested that students consult Memorial Library rules and regulations early as plans are made for thesis completion. See the Graduate School's information https://grad.wisc.edu/current-students/masters-guide/ and note the requirement for an advisor approval page; the form that appears in Appendix C may be used.

Master's Oral Examination
Candidates must pass an oral exam administered by a three-member committee, selected by the student's advisor. Students who have passed the oral part of the Ph.D. Qualifying Exam will be deemed to have passed the Master's oral exam, unless they have written an M.S. thesis. The use of thesis credits (NE 790) as part of the 30-credit M.S. requirement always requires an oral defense, and in these cases, two of the committee members must be members of UW-Madison Graduate Faculty. Students completing a coursework-only M.S. must have three members of the UW-Madison Graduate Faculty on their committees. For more information, see https://grad.wisc.edu/documents/committees/.

The oral exam will be on the thesis if the student submits one; otherwise, it will be on coursework taken by the student. The student will have two chances to pass the oral exam, with at least one month between the two exams. Students should contact their advisor with respect to the timing of the exam and the composition of the committee.

Application Procedures for the Master's Degree

Below is a summary of some of the Graduate School requirements. This is not a complete list. Please review the Graduate School Academic Policies and Procedures website for a complete list, or contact the Graduate School.
To receive a master’s degree, contact the Graduate Student Services Office, 3182 Mechanical Engineering, at the beginning of the semester in which you intend to graduate. Have your advisor check that you have met department requirements, then Student Services will check that you have met the Graduate School’s requirements and will request a warrant on your behalf from the Graduate School. You need to be enrolled for a minimum of two graduate-level credits (300 or above) for a grade (audits and pass/fail do not satisfy this requirement) during the semester in which you intend to graduate. For more information and for deadlines see Expecting your Master’s Degree? Procedures to Help, found at the website http://grad.wisc.edu/currentstudents/degree/.

If you have a prior Master's degree from this University, or are expecting to complete two separate degrees during the same semester, you must submit along with your degree application a letter from each department that includes an official (signed by advisor or Department Chair) list of courses used for each degree. Your application is not complete until the two lists are received.

You must have a graduate GPA of at least 3.0/4.0 and no incomplete or progress grades on your record. (Progress grades in NE 790 or NE 890 are allowed.).

A signed Warrant is a document needed to graduate. The Warrant is issued by the Graduate School for one semester only. The Warrant is signed by your academic advisor and the Department Chair indicating that all degree requirements have been met. Warrants can only be issued after all other incomplete and progress grades are cleared.

If the Department has signed and returned your Warrant to the Graduate School, and you subsequently receive an incomplete or progress grade, you will graduate during the semester in which your grade is cleared.
Doctor of Philosophy Degree

Course Requirements
1. All students must fulfill the coursework requirements for the M.S. degree whether receiving the M.S. degree or going directly to the Ph.D. Students should consult with their advisors as to whether coursework taken elsewhere will fulfill some or all of the requirements.

2. The candidate is required to complete one course in each of the following areas:
   - Fission Reactors (e.g., NE 405, 408, 411, 506, 520, 550, 555, 565, 574)
   - Plasma Physics & Fusion (e.g., NE 525, 527, 528, 536)
   - Materials (e.g., NE 423, 541, EP 562, Physics 551)
   - Engineering Mathematics & Computation (e.g., EP 547, 548; CS 513, 514, 713; Math 703)

   The courses listed in parentheses are examples of courses that will meet this requirement, and are not meant to be a restricted list of possible courses. These courses must be taken as a graduate student and be at the 400 level or above. If a student has taken one or more of the courses in some area as an undergraduate student, he or she would need to take another course in the same area. Students possessing substantial background in any of the four areas may request to be excused from the requirement to take a course in that area either by petition to the Department Chair or in the student's Doctoral Plan.

3. The candidate must take three 700 level courses as part of their doctoral plan. Doctoral students may take additional advanced courses as appropriate to their particular field of specialization.

4. The candidate must satisfy the Ph.D. Technical Minor requirement.

5. The candidate must satisfy the Ph.D. Non-Technical Minor requirement.

6. Students must take a minimum of 51 credits (consisting of coursework and 890/990 credits), with at least 26 credits being graduate level (as defined above in the MS requirements).

7. The candidate must take at least 9 credits of technical coursework at the graduate level beyond the courses required to fulfill the MS degree (30 + 9 = 39 crs). If a student has completed a M.S. thesis, the minimum number of technical credits of coursework required is 39 credits minus the number assigned to the M.S. thesis (max. 12 crs).

8. Students may transfer up to 6 credits of graduate work taken at another institution if they meet departmental M.S. requirements.

Ph.D. Technical Minor

The minor field of study must be chosen in consultation with the major professor. The Ph.D. Minor Agreement Form must be on file with the Engineering Physics Office halfway through the minor program. Forms are available from the Graduate Student Services Office, 3182 Mechanical Engineering.

There are two minor options available:

   **Minor Option A:**
   Students minor in a single department and satisfy the minor requirements of that department. This requires a minimum of 10 credits. Individual departments will have their own course requirements.
Minors Option B (Distributed Minor):
This option requires a minimum of 10 credits in two or more departments outside the major, in related courses selected for their relevance to a particular area of concentration. No course below the 400 level may be used to satisfy this requirement.

Ph.D. Qualifying Examination

Qualifying Exam Scheduling
The examination is given each fall and spring semester within the first week of classes. All eligible students will receive notice each time the exam is given. It is the student’s responsibility to consult with his or her advisor for approval to take the exam at that time and the specific exams to be taken.

The exam must be first taken no later than completion of the M.S. requirements, or the beginning of the fifth semester of graduate study, whichever comes first. Students entering the program with a Master's degree in EM or NEEP from another institution, and taking the qualifying exam in that same major, should take the exam by the beginning of their third semester.

Requirements for Passing the Qualifying Exam
Students are given two chances to pass the set of qualifying exams. All exams are to be graded on a pass/fail basis. If an individual exam is failed, it must be retaken the next time that qualifying exams are scheduled. An exam that is passed does not have to be repeated, independent of student performance on the other exams.

Subject-Area Options for the Qualifying Exam
The student with their advisor’s approval will sign up to take 3 three-hour closed book written exams from a possible list of 7 exams plus an oral exam. These 7 written exams are planned to be in the following topic areas (resources detailed below):

- Mathematics (Math 319, 320, 321 and 340 or similar topics in EP/EMA 547)
- Classical Physics (Physics 311 and 322)
- Modern Physics (Physics 241 and NE 305)
- Mechanics and Materials (EMA 303, 506 and MS&E 350)
- Dynamics and Vibrations (EMA 202, 542, 545)
- Momentum and Heat Transfer (CBE 320 or similar topics in ME 363, 364)
- Reactor Analysis and Radiation Protection (NE 405, 408, 427)

Exceptions to the Qualifying Exam Policy
In a few cases it may be unreasonable to retake the exam the next time it is given; in this case the student should petition the Department for permission to defer the reexamination. Such a petition should be by letter and must be received by the Department Chair before one month after learning the outcome of the first examination. If extenuating circumstances should arise thereafter and before the next exam, the student can petition the Department for a deferral.

On rare occasion, extenuating circumstances, such as a medical condition, may arise that affects a student's ability to pass the qualifying examination in two attempts. If a student fails the qualifying examination twice, and after reviewing the graded second exam and consultation with his or her advisor, the student feels that extenuating circumstance hindered his or her performance, he or she can petition the Department for a third attempt. Such a petition should be by letter and must be received by the Department Chair within one month after learning the outcome of the second examination. The Department faculty will review the petition and decide whether the student will be granted a third opportunity to pass the exam.

Description of the Oral Qualifying Exam
An oral exam is required for all students taking the qualifying exam and will be graded on a pass/fail
basis. The oral exams are scheduled immediately after the written exams. The subject matter of the questions is based on the written exams chosen by the student and his or her advisor (i.e., engineering mechanics, plasma physics or nuclear engineering). The oral exam committee consists of 3 faculty members, including the student's advisor and members from two of the three areas in which written exams were taken. The oral exam lasts approximately one hour.

**Description of Qualifying Examination Written Exams**

Listed below are topics, courses and texts representative of material to be covered on the respective examinations. Prior exams (without solutions) are available from the Qualifying Exam faculty coordinator or the Department office.

**A. Engineering Mathematics** (3 hours, typically 4 out of 6 questions):
- Ordinary Differential Equations (Math 319)
  - Boyce & DiPrima, *Elementary Differential Equations & Boundary Value Problems*
- Applied Mathematical Analysis (Math 321)
  - Greenberg, *Advanced Engineering Mathematics*
  - Hildebrand, *Advanced Calculus for Applications*
- Linear Algebra (Math 340)
  - Lay, *Linear Algebra and Its Applications*

**B. Classical Physics** (3 hours, typically 4 out of 6 questions):
- Mechanics (Physics 311)
  - Marion and Thornton, *Classical Dynamics of Particles & Systems*
- Intermediate Electricity and Magnetism (Physics 322)
  - Griffiths, *Introduction to Electrodynamics*
  - Lorrain & Corson, *Electromagnetic Fields and Waves*

**C. Modern Physics** (3 hours, typically 4 out of 6 questions):
- Fundamentals of Modern Physics (Physics 241)
  - Tipler, *Elementary Modern Physics*
- Atomic and Nuclear Physics (NE 305)
  - Krane, *Introductory Nuclear Physics*

**D. Mechanics and Materials** (3 hours, typically 4 out of 6 questions):
- Mechanics of Materials (EMA 303)
  - Gere, *Mechanics of Materials*
- Advanced Mechanics of Materials (EMA 506)
  - Cook & Young, *Advanced Mechanics of Materials*
- Fundamentals of Materials Science (MSAE 350 or 351)
  - Van Vlack, *Elements of Materials Science and Engineering*
  - Callister, *Materials Science and Engineering, An Introduction*

**E. Dynamics and Vibrations** (3 hours, typically 4 out of 6 questions):
- Elementary Dynamics (EMA 202)
- Advanced Dynamics (EMA 542)
  - Ginsberg, *Advanced Engineering Dynamics*
- Mechanical Vibrations (EMA 545)
  - Thomson, *Theory of Vibrations with Applications*
  - Ginsberg, *Mechanical and Structural Vibration*

**F. Momentum and Heat Transfer** (3 hours, typically 4 out of 6 questions):
- Transport Phenomena (CBE 320)
  - Bird, Stewart and Lightfoot, *Transport Phenomena***OR***
Elementary Fluid Dynamics (ME 363)  
Fox & McDonald, *Introduction to Fluid Mechanics*  
Heat Transfer (ME 364) Incropera & DeWitt, *Fundamentals of Heat Transfer*

**G. Reactor Analysis and Radiation Protection** (3 hours, typically 4 out of 6 questions):  
Nuclear Reactor Theory (NE 405)  
Duderstadt and Hamilton, *Nuclear Reactor Analysis*  
Ionizing Radiation (NE 408)  
Lamarsh, *Introduction to Nuclear Engineering*  
Nuclear Instrumentation (NE 427)  
Knoll, *Radiation Detection and Measurement*

**Non-Technical Minor**

**Ph.D. candidates must complete one of the following four study options prior to receiving dissertator status.** As this is a formal Department requirement, the student should select a Non-Technical Minor early in the program, and must complete it to achieve dissertator status (see below). The Non-Technical Minor must be planned with the help of the candidate's advisor and must be approved by the Department Non-Technical Minor Advisor except for Study Option IV which must be approved by the Department faculty. A *Non-Technical Minor Approval Form* is available from the Graduate Student Services Office, 3182 Mechanical Engineering, and must be filed prior to submission of the doctoral plan form. Courses below the 400 level may be used as a part of the Non-Technical Minor.

**Study Option I:** Technology-Society Interaction Coursework. This option is intended to increase the student's awareness of the possible effects of technology on society and of the professional responsibilities of engineers and scientists in understanding such side effects. These effects could, for example, involve the influence of engineering on advancement of human welfare, on the distribution of wealth in society, or on environmental and ecological systems.

Suggested courses for fulfilling **Option I** include the following:  
CEE 320 Environmental Engineering  
CEE 423/ME 466 Air Pollution--Effects, Measurements and Control  
Econ 474 Economic Problems of Developing Areas  
Geog 305 Introduction to the City  
Geog 505 Urban Spatial Patterns & Theories  
Geol 410 Minerals as a Public Problem  
History 402 American Urban History Since 1870  
Hist Sci 327 Science, Technology, and Society  
Hist Sci 331 Science, Medicine and Religion  
ME 477 Energy Utilization Technology

**Study Option II:** Humanistic Society Studies Coursework. The basic objectives of this option are to help prepare the student to bridge the gap between C.P. Snow's "Two Cultures." Snow's 1959 lecture thesis was that the breakdown of communication between the "two cultures" of modern society - the sciences and the humanities - was a major hindrance to solving the world's problems. Study might be designed to give a greater appreciation of the arts such as the classics, music, or painting, or it might be designed, for example, as preparation for translating technical information to the non-technical public.
Suggested areas of study to fulfill Option II include Anthropology, Area Studies, Art, Art History, Classics, Comparative Literature, Contemporary Trends, English (literature), Foreign Languages (literature), Social Work, Sociology, and Speech.

Under either Option I or II, the student must take 6 credits of coursework. The courses must be approved by the student's advisor and the non-technical minor advisor, and the 6 credits should be concentrated in one topical area. Grades in these courses need not meet the Departmental Grade Policy. However, note that all grades in 300 level or above courses (including grades for Non-Technical Minor courses) are calculated in the Graduate School minimum 3.0 graduation requirement.

Study Option III: Foreign Culture Coursework. This option is intended for the student who desires to live and work in a foreign nation or work with people of a foreign culture. Examples include studies of the history of a foreign nation, of the political stability of a region of the world, of the culture of a particular group within a nation, or of the spoken language of a foreign nation.

For Option III the student must take six credits of courses under all of the same conditions and requirements as for Option I and II unless choosing language study. For the latter case, the student must attain a grade of C or better in all courses. If the student has previous knowledge of a language, it is required that either courses beyond the introductory level will be elected or that another language will be elected.

Study Option IV: Technology-Society Interactions Experience. There are many possible technology-society interactions that might be more educational and meaningful for the student as an actual experience than coursework. For example, the student might run for and be elected to a position of alderperson in the city government. Consequently, this option allows the student to pursue a particular aspect of the interaction using his own time and resources.

Study Option IV activity must be planned with the student's advisor and be approved by the faculty. The effort required should be equivalent to 6 credits of coursework. Upon completion of this program, the student will prepare a written or oral report.

Note: Foreign students from countries in which English is not the native tongue have inherently fulfilled these non-technical study goals and are exempt from these formal requirements.

Doctoral Plan of Study

The Department will formally accept the student as a candidate for the Ph.D. after the passage of the Qualifying Examination and upon approval of a doctoral plan of study showing the intended courses of study. The format to be used for this application is given in Appendix B. The Departmental faculty will review the student's entire academic history. It will act on the application based on its collective knowledge of the student's performance in and out of formal coursework. Factors which will be considered include: (a) whether the student would likely profit from further, formal academic study, and (b) whether the student meets the high academic standards and the standards of intellectual integrity expected of a Ph.D. holder from the University of Wisconsin. This is a decision of the Department as a whole, and, while the advice of the student's major professor is solicited, the major professor does not make the decision alone. The student is expected to discuss the doctoral plan in detail with and receive approval of their major professor in order to develop a coherent academic plan of doctoral study.

Approval of the student's proposed course of study will automatically indicate acceptance by the Department as a Ph.D. candidate, and the student will be advised in writing. Attention is called to the fact
that formal acceptance as a candidate, rather than passage of the Qualifying Examination, ordinarily constitutes the major step in progress towards the Ph.D.

To assure that a coherent program is planned, the student must submit the Doctoral Plan of Study one month before the end of the semester following the one in which the Qualifying Exam is passed.

If a distributed Technical Minor is proposed, acceptance as a Ph.D. candidate constitutes Departmental approval of that Technical Minor. If it becomes necessary to modify the student's proposed course of study after it has been approved, it is the student's responsibility to bring the matter to the attention of the faculty in writing.

Note: The Graduate School considers an applicant formally admitted to candidacy for the Ph.D. degree when the student has:

(a) passed the comprehensive Preliminary Examination in the major field,
(b) obtained approval of the proposed technical minor requirement, and
(c) presented the title or special field of the proposed thesis, approved by the major professor.

Foreign Language Requirement
There is no foreign language requirement for the Ph.D. program. Students should note the opportunity for foreign language or foreign culture study under the Non-Technical Minor.

Ph.D. Preliminary Examination
After acceptance of the student's Doctoral Plan of Study, the student must take an oral preliminary examination. Students are expected to pass the Ph.D. Preliminary Examination no later than the end of the third year of graduate studies, or by the end of the second regular semester following the one in which the Ph.D. Qualifying Examination was passed, whichever is later. They are required to take the Preliminary Examination within four years of passing the Ph.D. Qualifying Examination.

In preparation for this examination, the student shall submit a written thesis proposal containing a discussion of the thesis problem, a survey of pertinent literature, an evaluation of the importance of the problem, an outline of the proposed method of solving the problem, drawings of any equipment to be constructed, a cost estimate, and any preliminary results obtained. The student will then defend the thesis proposal in an oral Preliminary Examination. The Examination Committee will normally be the same as selected for the Final Oral Examination. It will include at least one member from outside the departmental faculty (EP), and it will be chosen to make a critical evaluation of the proposed thesis. The candidate must apply for a warrant from the Graduate School through the Graduate Student Services Office, 3182 Mechanical Engineering, at least three weeks prior to the exam.

Should the candidate not pass the preliminary examination, the student is granted a second opportunity to be held within six months of the first examination.

Dissertator Status
All Ph.D. candidates who passed their Preliminary Examinations and completed the major as well as the minor requirements can be designated dissertators. Dissertators register for exactly three credits. (The dissertator fee is substantially lower than the usual cost of the 8-credit load.) Dissertators normally enroll in thesis and research courses (NE 990), but with the approval of their advisors are permitted to substitute three credits of any other graduate level course. Dissertators should register each semester until the Ph.D. thesis is filed. If the student fails to do so, a Ph.D. Dissertation and Degree Completion Fee equal to 12 times the current dissertator per-credit rate is required.
Final Oral Examination
An oral examination on the findings of the Ph.D. research is required at the end of the thesis work. This thesis defense is made before a committee of five members, who have had access to a copy of the thesis for at least 10 days prior to the oral examination. It is advisable to choose this committee as close to that of the Preliminary Examination Committee as practical. At least 4 of the committee members must be members of the UW-Madison Graduate Faculty. At least 1 member of the committee must be from outside the student’s major program. One of the members of the committee may be from outside the UW-Madison, subject to approval by the EP Department Faculty. (The departmental requirements exceed the Graduate School minimum requirements at https://grad.wisc.edu/documents/committees/.) The candidate must apply for a warrant from the Graduate School through the Graduate Student Services Office, 3182 Mechanical Engineering, at least three weeks prior to the exam.

This examination shall be publicly announced at least one week prior to the examination date. Faculty and students are invited to attend.

Thesis
The thesis must be the candidate's own work; it reports on the original research carried out by the student for the Ph.D. degree. It may be the result of research enterprises in which others have collaborated, but in such cases the candidate is required to present a substantial portion which represents the candidate's own contribution.

The total cost and preparation of the thesis is the responsibility of the student. Detailed instructions for thesis preparation are available from the Graduate School Office in Bascom Hall, and on the Graduate School webpage, https://grad.wisc.edu/current-students/doctoral-guide/.

Library Copy: The submitted thesis must meet the specifications of the Graduate School. See the above link for detailed information.

Department and Major Professor Copies: You should provide copies of the thesis to the department and your advisor and they should be bound in durable black Buckram binding with hard cover (Grimm’s book binding can do this or check with the library for this service.) The student's name, degree and year of graduation should be printed in bold gold letters on the book spine. The front and back covers should remain blank.

Industrial/Research Sponsor Copy: The major professor will determine if additional copies are needed and advise the student as to the specifications of the copy.

Criteria for Satisfactory Progress
It is important that graduate students make satisfactory progress in their program of study. One way of measuring the student's progress is his or her schedule for completing various requirements for the Ph.D. degree. The relevant deadlines are listed below. Students not meeting these deadlines are considered to not be making satisfactory progress and may become ineligible for financial support and/or be dropped from the program.

1. The Qualifying Examination must be taken no later than completion of the M.S. requirements, or the beginning of the fifth semester of graduate study, whichever comes first. Students entering the program with a Master's degree in EMA, EP or NE from another institution must take the exam by the beginning of their third semester.

2. The Graduate School Ph.D. Minor Agreement Form must be on file with the Department of Engineering Physics halfway through the minor program.
3. Students are expected to submit the Doctoral Plan of Study one month before the end of the semester following the one in which the Qualifying Exam is passed.

4. Students are expected to schedule and pass the Ph.D. Preliminary Examination no later than the end of the third year of graduate studies, or by the end of the second regular semester following the one in which the Ph.D. Qualifying Examination is passed, whichever is later. A candidate who fails to take their Preliminary Exam within four years of passing their Qualifying Exam must retake the Qualifying Exam unless there are extenuating circumstances (such as medical) and the Department faculty approves a delay. Students in this situation should meet with their advisor and develop a plan for taking the preliminary exam, subject to approval by the Department faculty.

5. A candidate who fails to take the Final Oral Examination and deposit the dissertation in the Memorial Library within 5 years after passing the Preliminary Examination must take another Preliminary Examination. See the Graduate School's policies on preliminary examinations and time limits for additional information.

**Minor in Nuclear Engineering and Engineering Physics**

For students in other departments seeking a minor in *Nuclear Engineering and Engineering Physics*, the following requirements apply:

1. A student who has earned an M.S. degree in *Nuclear Engineering and Engineering Physics* will be considered to have fulfilled the minor requirements.

2. A minimum of 4 NE courses, 400 level or above, are required for the minor. These are decided in consultation with the student’s advisor.
   a. All courses used for the minor must be 400 level or above and taken after the bachelor’s degree.
   b. Ordinarily only one course (maximum of 3 credits) of independent study is allowed (699, 999).
   c. Research and thesis courses may not be used for the minor.
   d. No more than 5 credits completed 5 or more years prior to admission to the Ph.D. major may be used.
   e. Courses taken 10 or more years ago may not be used.
   f. Courses taken pass-fail or for audit may not be used.
   g. Courses with grades of S given in courses graded on a credit/no credit basis are acceptable.

3. A GPA of 3.0 must be maintained for the minor.

4. A maximum of 6 credits may be transferred from other institutions to satisfy the minor requirements.

5. The minor program must be approved by the Minor Professor, appointed by the department chair.

APPENDIX A

Engineering Mechanics and Nuclear Engineering and Engineering Physics Master’s Timeline

Steps towards your degree

- Coursework MS Option:
  o Begin coursework
  o Complete coursework
  o Have advisor check progress toward Department degree requirements
  o Request MS warrant several weeks before oral exam and/or graduation
  o Take oral exam \( \rightarrow \) NEEP Only
  o MS Degree Awarded

- Thesis MS Option
  o Begin coursework
  o Identify research advisor and topic
    ▪ Sign up for Research credits: EMA 790 or NE 790
  o Complete research and write thesis
  o Have advisor check progress toward Department degree requirements
  o Request MS warrant several weeks before oral exam
  o Thesis Oral Defense
  o MS Degree awarded
Engineering Mechanics and Nuclear Engineering PhD Program Timeline

Steps towards your degree

- Identify research advisor before arriving on campus or during your first semester
- Begin coursework and start research (EMA 890 or NE 890)
- Take Qualifying Exam (third or fourth semester)
- Finish MS coursework
  - Request MS warrant if an MS is desired
- Submit Doctoral Plan (the semester after the Qualifying Exam was passed)
- Minor Requirements Completed (another 1-3 semesters)
- Write Prelim
- Request Prelim Warrant several weeks before Prelim Exam
- Take Prelim Exam (submit signed warrant to Graduate School after coursework is completed)
- Dissertator (EMA 990 or NE 990)
- Finish Thesis
- Have advisor check progress toward Department degree requirements
- Request Final Warrant several weeks before Prelim Exam
  - Defend Thesis
- Warrant signed
- Thesis must be completed within 5 years of Prelim Exam
  - Make Corrections
  - Final Appointment at Graduate School (turn in final warrant, etc.)
  - Deposit bound thesis copy to Department and Advisor
- PhD Degree awarded
**APPENDIX B  SAMPLE**

Date: August 1, 2015  
To: Douglass Henderson, Department Chair  
From: John Q. Public  
Subject: NEEP Doctoral Plan

I request approval of the following doctoral plan and formal acceptance as a Ph.D. candidate in the NEEP program.

A. TECHNICAL COURSEWORK IN GRADUATE SCHOOL (already taken or to be taken)

D. TECHNICAL MINOR

I chose the distributed minor option; see courses listed above.
E. NON-TECHNICAL MINOR
My non-technical minor will be in Study Option III. The courses I have taken to complete this minor are:

<table>
<thead>
<tr>
<th>Course No. and Title</th>
<th>Credits</th>
<th>Date</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>East Asian 123 Elementary Japanese I</td>
<td>3</td>
<td>Spring 2002</td>
<td>A</td>
</tr>
<tr>
<td>East Asian 124 Elementary Japanese II</td>
<td>3</td>
<td>Fall 2002</td>
<td>A</td>
</tr>
</tbody>
</table>

Prof. Douglass Henderson, the Department Non-Technical Minor Advisor, approved this minor on Jan. 31, 2015.

F. EXAMINING COMMITTEE
My advisor, Professor Plasma, recommends the following five staff people constitute my Preliminary Examination Committee and, if practical, my Final Oral Committee:

__________________________________________
__________________________________________
__________________________________________
__________________________________________

I have obtained the consent of each of the faculty members listed to serve on these committees. At least one of these members is from outside the EP Department.

G. MASTER'S THESIS
I did not perform a Master's thesis. (If applicable, give title, major professor, institution.)

H. Ph.D. QUALIFYING EXAM
I passed the Ph.D. qualifying exam on ________________.

I. DEGREES HELD
I have previously received the following degree:
Bachelor of Science in Applied Physics, 1999, Michigan Technological University and Masters of Science in Applied Physics, 2001, Michigan State University

J. PERTINENT GRADUATE COURSES
I have taken the following graduate courses at ___________ which are particularly significant in my present plans:

<table>
<thead>
<tr>
<th>Course No. and Title</th>
<th>Credits</th>
<th>Date</th>
<th>Grade</th>
</tr>
</thead>
</table>
K. PERTINENT UNDERGRADUATE COURSES
I have taken the following undergraduate courses at Michigan Tech. which are particularly significant in my present plans:

<table>
<thead>
<tr>
<th>Course No. and Title</th>
<th>Credits</th>
<th>Date</th>
<th>Grade</th>
</tr>
</thead>
</table>

The following courses were taken as a graduate student at UW to satisfy admission requirements:

<table>
<thead>
<tr>
<th>Course No. and Title</th>
<th>Credits</th>
<th>Date</th>
<th>Grade</th>
</tr>
</thead>
</table>

Respectfully submitted:

__________________________
