Ovarian cancer is a major cancer of the female reproductive organs. With the lack of effective early diagnostic strategies and therapies, ovarian cancer is difficult to treat and manage. In this talk we will focus on our ongoing unpublished work on developing novel high-end models for ovarian cancer and new chemo and immunotherapies for treatment of this cancer.

Manish Patankar, PhD
Professor, Vice Chair for Research, Director of the Division of Reproductive Sciences
Department of Obstetrics and Gynecology
University of Wisconsin-Madison

Ovarian cancer is a major cancer of the female reproductive organs. With the lack of effective early diagnostic strategies and therapies, ovarian cancer is difficult to treat and manage. In this talk we will focus on our ongoing unpublished work on developing novel high-end models for ovarian cancer and new chemo and immunotherapies for treatment of this cancer.

ABOUT the SPEAKER

Dr. Patankar graduated from the University of Bombay, India with a BS in Chemistry in 1987. Subsequently, he received his Master’s of Science in Organic Chemistry from the University of Bombay in 1990, and his Master’s of Chemistry from Old Dominion University in Norfolk, Virginia in 1993. Dr. Patankar then completed his PhD in Biomedical Sciences at Eastern Virginia Medical School/Old Dominion University in 1998.

Dr. Patankar was an instructor and Research Professor at Eastern Virginia Medical School until 2004 when he joined the department as Professor and also became a member of the UW-Madison Carbone Cancer Center. His current research includes developing diagnostic tests for ovarian cancer and preeclampsia and strategies for treating ovarian cancer.
